

UPPERCASE G

A custom character with an added customized arm and reduced upper flourish from the original typeface design. The character has been customized to read as a G even when separated from the wordmark. The left upper corner of the arm has been rounded to counter the contrast of the straight stroke.

THE TRIO

This part of the mark is an allusion to the three organizations, The Institute, the Greenway Court Theatre and the Trading Post. The three colors used are key colors in the individual marks. Yellow for the theatre spotlight, the collegiate blue of the Institute and finally the bright retro blue green of the Post.

SLAB SERIF

Instead of a San-serif or standard serif alternative for this second half of the wordmark, this is instead a slab serif. Strong and grounded it is designed to contrast the script Greenway is set in. Think of it like a tree with it's leaves the core trunk and the reaching leafy branches above it.

COLOR

PMS 576 C

PMS 469 C

This new palette is designed to be a forward progression of the previous Greenway identity. The green is brighter and lighter. It is ultimately a more open and fresh tone. The added secondary color is the grounded earthy note. (See note on divider rationale to the far left of this page.)

AS DIVIDER

The trio can also be used as a divider. It may be locked up with a partner logo, a header or a footer for example. It's a way subtly to carry the brand into nuanced areas of the collateral.

Greenway Identity Color Guide

COLOR FORMULAS FOR PRINT AND WEB

It will likely be rare that we can use the spot color printing option because of cost. However you can still supply the numbers for reference during press checks when jobs are sent out to be reproduced on an offset press. The CMYK solution will be the one generally used in print. However it could be that a digital press might request a job as RGB, this is specific to vendor and vendor guidelines should be followed.

IDENTITIES AND COLORWAYS

LOGOS

Each logo is a reflection of the organization it represents while still relating to one another.

1.) The theatre echoes the spotlight as does the style of typography reminiscent of theatre marquis past and present.

2.) The institute is focused on a collegiate, academic as reflected in the compass abstraction and heavy serified typeface reminiscent of school jacket lettering.

3.) Finally the Melrose Trading Post has always been equally inspired by roadside signage of the route 66 era and symbols on maps. The Trading post is both a an adventure and a destination.

COLOR

The proposed color palettes are below and should be referenced with the hard copy spot color guide.

Greenway Identity on Color Fields

SPECIAL USE CASE SCENARIOS

There will be times when the standard version of the Greenway logo will not render legibly. Below we are covering typical full bleed background color issues that should solve the majority of these problems.

On black option 1 using the alternate lightest yellow in the system for the tagline.

There may be instances where the logo is reversed out of it's own shade of green.

This yellow works well on a dark green

This yellow works well also on a red

Should the identity need to be produced in a 1 color black and white job

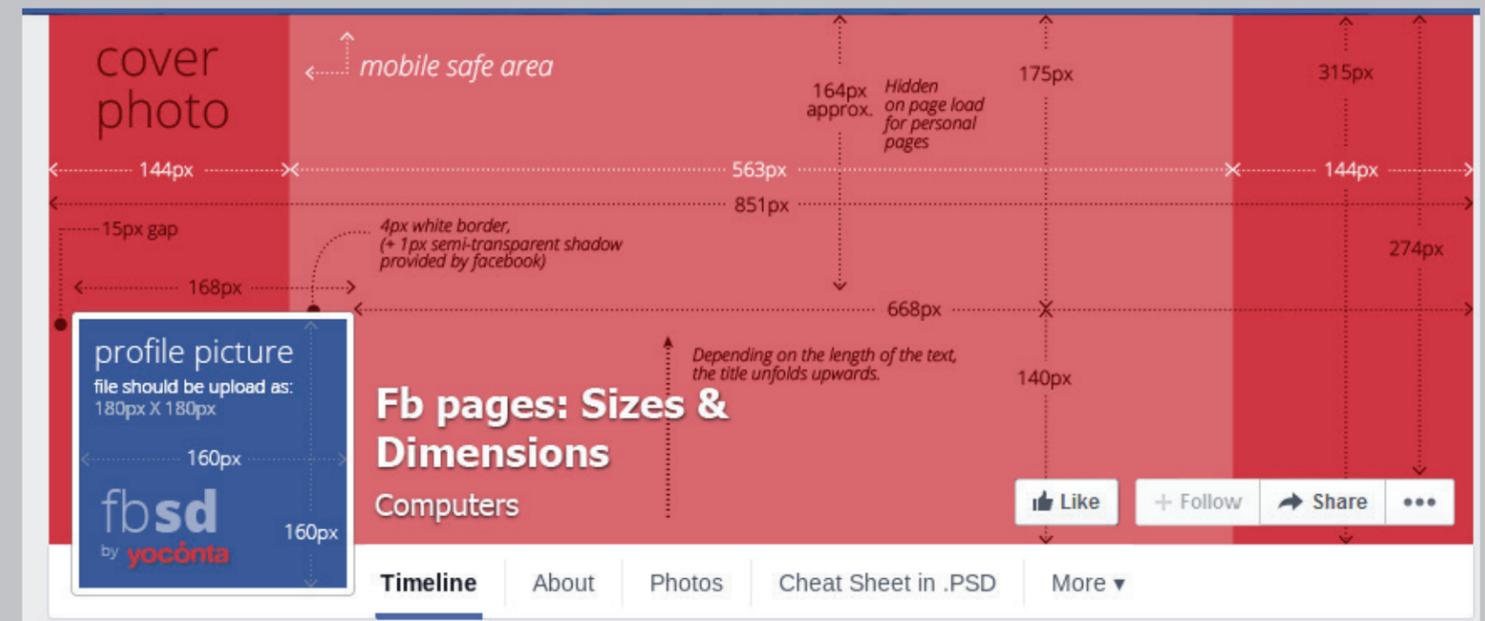

profile pic, 180px X 180px

FACEBOOK

Note the diagram to the right. The full width of a facebook profile image is 851 x 315 px. But be cautious of type laid on this graphic 140px from the bottom should be left clear as should 144px either side for mobile view considerations. The mobile safe area is delineated in the center pale pink box. Facebook has some very very ugly compression when uploading banner pic directly. To mitigate this problem the following should result in a much less compressed header.

- 1.) Save for web in photoshop as .png 8 bit
- 2.) Uploaded it to a facebook gallery with "high quality" checked
- 3.) from the home page banner switcher instead of uploading do a "choose from photos" in the banner uploader and locat the .png you uploaded in step 2

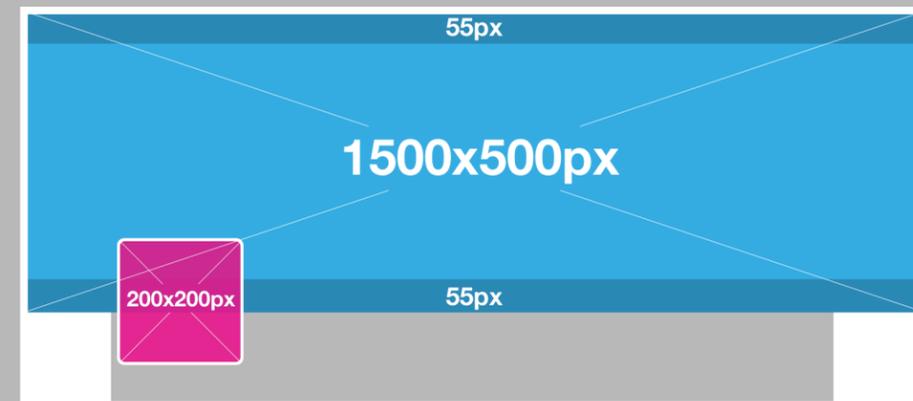

Uniting Communities Through
Art, Education And Enterprise.

Twitter

The profile pic recommended size is 400px x 400px and the header image is 1500px x 500px. Be sure to place any live text 55px from the top or bottom as this area is trimmed on mobile view

Go! Mark Exploration

As noted I don't think the angle of the G works well with a perfectly symmetrical circle. Also of note we wouldn't be able to include the outer circle of type without creating added confusion. We could include the internal circle as shown but this would be roughly the minimum size it could render.

Go! Mark Exploration

I recommend this solution, this allows the companion mark to be the full height of the G. Note the lockup in the sample illustrates both.
